# Recall

Zan if and then we have the following test 1. Integral test: Find f sit fis conti, decreasing, ave sit f(n)=an f n2N thon f(x)dx converge (or diverge) =) Ean converge n=N (ordiverge)

2. Direct composision test if Ear = Ebn and Ebn converge ther Ean if Ear = Ebn and Ear diverge then Ebn diverge

3. Limit composision test 4. Alternating series test: SCI) an if an >0 anti Lan

Sequence and Series Converges On 30 as n 300 September 2, 2024 2/49

# Absolute convergence

### **Definition**

A series  $\sum a_n$  converges absolutely (is absolutely convergent) if the corresponding series of absolute values,  $\sum |a_n|$  converges.

$$\sum \left(\frac{-1}{4}\right)^n$$
 converges absolutely as  $\sum \left(\frac{1}{4}\right)^n$  converges.

## Absolute convergence

#### **Definition**

A series  $\sum a_n$  converges absolutely (is absolutely convergent) if the corresponding series of absolute values,  $\sum |a_n|$  converges.

$$\sum \left(\frac{-1}{4}\right)^n$$
 converges absolutely as  $\sum \left(\frac{1}{4}\right)^n$  converges.

### Theorem

**Absolute convergent test:** If  $\sum |a_n|$  converges, then  $\sum a_n$  converges.

Absolute convergence => convergence.

Ex.

3 / 49

### **Proof**

$$\frac{[-|a_n| \le a_n \le |a_n|]}{[a_n \le |a_n| \le 2|a_n|]}$$

$$\frac{[-|a_n| \le a_n + |a_n| \le 2|a_n|]}{[a_n \le |a_n| \le 2|a_n|]}$$

$$\frac{[-|a_n| \le a_n + |a_n| \le 2|a_n|]}{[a_n \le |a_n| \le |a_n| \le |a_n|]}$$

$$\frac{[-|a_n| \le a_n + |a_n|]}{[a_n \le |a_n| \le |a_n|]}$$

$$\frac{[-|a_n| \le a_n + |a_n|]}{[a_n \le |a_n| \le |a_n|]}$$

$$\frac{[-|a_n| \le a_n + |a_n|]}{[a_n \le |a_n| \le |a_n|]}$$

$$\frac{[-|a_n| \le a_n + |a_n|]}{[a_n \le |a_n| \le |a_n|]}$$

$$\frac{[-|a_n| \le a_n + |a_n|]}{[a_n \le |a_n| \le |a_n|]}$$

$$\frac{[-|a_n| \le a_n + |a_n|]}{[a_n \le |a_n| \le |a_n|]}$$

$$\frac{[-|a_n| \le a_n + |a_n|]}{[a_n \le |a_n| \le |a_n|]}$$

$$\frac{[-|a_n| \le a_n + |a_n|]}{[a_n \le |a_n| \le |a_n|]}$$

$$\frac{[-|a_n| \le a_n + |a_n|]}{[a_n \le |a_n| \le |a_n|]}$$

$$\frac{[-|a_n| \le a_n + |a_n|]}{[a_n \le |a_n| \le |a_n|]}$$

$$\frac{[-|a_n| \le a_n + |a_n|]}{[a_n \le |a_n| \le |a_n|]}$$

$$\frac{[-|a_n| \le a_n + |a_n|]}{[a_n \le |a_n| \le |a_n|]}$$

$$\frac{[-|a_n| \le a_n + |a_n|]}{[a_n \le |a_n| \le |a_n|]}$$

$$\frac{[-|a_n| \le a_n + |a_n|]}{[a_n \le |a_n| \le |a_n|]}$$

$$\frac{[-|a_n| \le a_n + |a_n|]}{[a_n \le a_n + |a_n|]}$$

$$\frac{[-|a_n| \le a_n + |a_n|]}{[a_n \le a_n + |a_n|]}$$

$$\frac{[-|a_n| \le a_n + |a_n|]}{[a_n \le a_n + |a_n|]}$$

$$\frac{[-|a_n| \le a_n + |a_n|]}{[a_n \le a_n + |a_n|]}$$

### Proof

$$-|a_n| \le a_n \le |a_n| \implies 0 \le a_n + |a_n| \le 2|a_n|.$$

$$\sum_{n=1}^{\infty} |a_n|$$
 converges  $\Longrightarrow \sum_{n=1}^{\infty} 2|a_n|$  converges. Thus By direct comparison

test,  $\sum_{n=1}^{\infty} a_n + |a_n|$  converges.

Now 
$$a_n = (a_n + |a_n| - |a_n|)$$
 and  $\sum_{n=1}^{\infty} a_n = \sum_{n=1}^{\infty} (a_n + |a_n|) - \sum_{n=1}^{\infty} |a_n|$ .

Thus  $\sum a_n$  converges.

$$\sum_{n=1}^{\infty} \frac{(-1)^{n+1}}{n^2}$$

$$\frac{1}{n^2} \quad \text{converges} \\
= \sum_{n=1}^{N+1} \frac{(-1)^{n+1}}{n^2} \quad \text{is absolutely} \\
= \sum_{n=1}^{N+1} \frac{(-1)^{n+1}}{n^2} \quad \text{convergent}.$$

$$\sum_{n=1}^{\infty} \frac{(-1)^{n+1}}{n^2}$$
 converges absolutely and hence 
$$\sum_{n=1}^{\infty} \frac{(-1)^{n+1}}{n^2}$$
 converges by the absolute convergent theorem.

$$\sum_{n=1}^{\infty} \frac{\sin n}{n^2}$$

$$0 \le |S(nn)| \le \frac{1}{N^2}$$

$$0 \le \frac{1}{N^2}$$

$$\sum_{n=1}^{\infty} \frac{(-1)^{n+1}}{n^2}$$
 converges absolutely and hence 
$$\sum_{n=1}^{\infty} \frac{(-1)^{n+1}}{n^2}$$
 converges by the absolute convergent theorem.

$$\sum_{n=1}^{\infty} \frac{\sin n}{n^2}$$
 converges absolutely and hence 
$$\sum_{n=1}^{\infty} \frac{\sin n}{n^2}$$
 converges.

### What about converse?

$$\sum_{n=1}^{\infty} \frac{(-1)^{n+1}}{n^2}$$
 converges absolutely and hence 
$$\sum_{n=1}^{\infty} \frac{(-1)^{n+1}}{n^2}$$
 converges by the absolute convergent theorem.

$$\sum_{n=1}^{\infty} \frac{\sin n}{n^2}$$
 converges absolutely and hence 
$$\sum_{n=1}^{\infty} \frac{\sin n}{n^2}$$
 converges.

What about converse?

#### Remark

Converse not true: 
$$\sum_{n=1}^{\infty} \frac{(-1)^{n+1}}{n}$$
 converges, but  $\sum_{n=1}^{\infty} \frac{1}{n}$  doesn't converge, hence  $\sum_{n=1}^{\infty} \frac{(-1)^{n+1}}{n}$  doesn't converge absolutely.

hence 
$$\sum_{n=1}^{\infty} \frac{(-1)^{n+1}}{n}$$
 doesn't converge absolutely.

### Definition

A series that is convergent but not absolutely convergent is called conditionally convergent.

$$\sum_{n=0}^{\infty} \frac{(-1)^{n+1}}{n}$$
 is conditionally convergent.(converges, but not absolutely convergent.) 
$$\sum_{n=0}^{\infty} \frac{(-1)^{n+1}}{n^p}, 0$$

### Rearranging terms in a series

We know  $\sum_{n=0}^{\infty} \frac{(-1)^{n+1}}{n}$  converges and say it converges to L. (hence conditional convergent, but not absolute convergent).

$$L = 2 \frac{(-1)^{n+1}}{N} = 1 - \frac{1}{2} + \frac{1}{3} - \frac{1}{4} + \frac{1}{5} - \frac{1}{6} + \frac{1}{7} - \frac{1}{6} + \frac{1}{7} - \frac{1}{6} + \frac{1}{7} - \frac{1}{6} + \frac{1}{7} - \frac{1}{7} - \frac{1}{7} - \frac{1}{7} + \frac{1}{7} - \frac{1}{$$

### Rearranging terms in a series

We know  $\sum_{n=0}^{\infty} \frac{(-1)^{n+1}}{n}$  converges and say it converges to L. (hence conditional convergent, but not absolute convergent).

$$2L = 2\sum_{n=0}^{\infty} \frac{(-1)^{n+1}}{n} = 2\left(1 - \frac{1}{2} + \frac{1}{3} - \frac{1}{4} + \frac{1}{5} - \frac{1}{6} + \frac{1}{7} - \frac{1}{8} + \frac{1}{9} - \frac{1}{10} \cdots\right)$$

$$= 2 - 1 + \frac{2}{3} - \frac{1}{2} + \frac{2}{5} - \frac{1}{3} + \frac{2}{7} - \frac{1}{4} + \frac{2}{9} - \frac{1}{5} + \frac{2}{11} \cdots$$

$$= (2 - 1) - \frac{1}{2} + \left(\frac{2}{3} - \frac{1}{3}\right) - \frac{1}{4} + \left(\frac{2}{5} - \frac{1}{5}\right) - \frac{1}{6} + \left(\frac{2}{7} - \frac{1}{7}\right) - \frac{1}{8} + \cdots$$

$$= 1 - \frac{1}{2} + \frac{1}{3} - \frac{1}{4} + \frac{1}{5} - \frac{1}{6} + \cdots$$

$$= L.$$

This shows that we cannot rearrange the terms of a conditionally convergent series and expect the new series to be the same as the original one. Can we rearrange the terms of an absolute convergent series?

#### Theorem

The Rearrangement Theorem for Absolutely Convergent Series: If

 $\sum_{n=1}^{\infty} a_n \text{ converges absolutely, and } b_1, b_2, \cdots, b_n, \cdots \text{ is any arrangement of }$ 

the sequence  $(a_n)$ , then  $\sum_{n=1}^{\infty} b_n$  converges absolutely and  $\sum_{n=1}^{\infty} a_n = \sum_{n=1}^{\infty} b_n$ .

$$\sum_{n=0}^{\infty} (-1)^{n} \left( \frac{1}{3} \right)^{n} - absolutely convergent$$

$$= 1 - \frac{1}{3} + \frac{1}{3^{2}} - \frac{1}{3^{2}} + \frac{1}{3^{4}} - \frac{1}{3^{4}} - \frac{1}{3^{4}} + \frac{1}{3^{4}} +$$

### Ratio test

#### Theorem

Let  $\sum_{n=0}^{\infty} a_n$  be any series and suppose that  $\lim_{n\to\infty} \left| \frac{a_{n+1}}{a_n} \right| = r$ . Then

- ullet (a) the series converges absolutely if r < 1,
- (b) the series diverges if r > 1 or r is infinite,
- (c) the test is inconclusive if r = 1.

### Ratio test

### Theorem

Let  $\sum_{n\to\infty} a_n$  be any series and suppose that  $\lim_{n\to\infty} \left|\frac{a_{n+1}}{a_n}\right| = r$ . Then n=0

- (a) the series converges absolutely if r < 1,
- (b) the series diverges if r > 1 or r is infinite,
- (c) the test is inconclusive if r = 1.

If we apply ratio test for  $\sum_{n=0}^{\infty} \frac{1}{n}$  (diverges) and  $\sum_{n=0}^{\infty} \frac{1}{n^2}$  (converges), both cases r=1.  $\left|\frac{a_{n+1}}{a_n}\right| = \frac{n}{n} = \frac{1}{n} = \frac{1}{n}$ 

Investigate the convergence of the following series:

$$\sum_{n=0}^{\infty} \frac{2^{n} + 5}{3^{n}},$$

$$Q_{N} = 2^{n} + 5$$

$$||Q_{N} - || = ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$||Q_{N} - || = ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + 5|| \times \frac{3^{N}}{2^{N} + 5}||$$

$$= ||Q_{N} - || + ||Q_{N} - ||$$

$$= ||Q_{N} - ||$$

$$= ||Q_{N} - || + ||Q_{N} - ||$$

$$= ||Q_{N} - || + ||Q_{N} - ||$$

Investigate the convergence of the following series:

• 
$$\sum_{n=0}^{\infty} \frac{2^n + 5}{3^n}$$
,  $\left| \frac{a_{n+1}}{a_n} \right| \to \frac{2}{3}$ , so converges.

$$\sum_{n=0}^{\infty} \frac{(2n)!}{(n!)^2},$$

$$\sum_{n=0}^{\infty} \frac{(2n)!}{(n!)^2}, \qquad \lim_{n \to \infty} \frac{(2n+1)!}{(n+1)!} = \frac{(2(n+1))!}{(n+1)!} \times \frac{n! \times n!}{(n+1)!}$$

Investigate the convergence of the following series:

• 
$$\sum_{n=0}^{\infty} \frac{2^n + 5}{3^n}$$
,  $\left| \frac{a_{n+1}}{a_n} \right| \to \frac{2}{3}$ , so converges.

• 
$$\sum_{n=0}^{\infty} \frac{(2n)!}{(n!)^2}$$
,  $\left|\frac{a_{n+1}}{a_n}\right| \to 4$ , so diverges.

• 
$$\sum_{n=0}^{\infty} \frac{4^n (n!)^2}{(2n!)}$$
,

$$\frac{1}{n-n} \frac{a_{n+1}}{a_n} = \frac{1}{n-n} \frac{y^{n+1}}{y^n} \frac{(n+1)!(n+1)!}{(2n+2)!}$$

$$\frac{x}{n!xn!}$$

Investigate the convergence of the following series:

- $\sum_{n=0}^{\infty} \frac{2^n + 5}{3^n}$ ,  $\left| \frac{a_{n+1}}{a_n} \right| \to \frac{2}{3}$ , so converges.
- $\sum_{n=0}^{\infty} \frac{(2n)!}{(n!)^2}$ ,  $\left|\frac{a_{n+1}}{a_n}\right| \to 4$ , so diverges.
- $\sum_{n=0}^{\infty} \frac{4^n (n!)^2}{(2n!)}$ ,  $\left|\frac{a_{n+1}}{a_n}\right| \to 1$ , so ratio test is inconclusive. Can you apply

any other test to conclude?

$$a_{n} = 4(n)^{2}$$
 $(2n)!$
